With the addition of more models to its range, the specialist forklift manufacturer Combilift continues to lead the way in the multi-directional and narrow aisle handling sector.

Any company that handles long and awkward loads, palletised goods and oversized loads can count on Combilift's products to make these procedures safer, more efficient and cost effective.

As well as the multi-directional models from the original C-Series, Combilift manufactures pedestrian stacker trucks, siders, stand-on forklifts, straddle carriers and the Aisle-Master range of articulated VNA forklifts. Lift capacities starting at 1t to over 80t are available, with diesel, LPG or electric power options.

Benefits of all the Combilift trucks is their versatility, indoor and outdoor capability and manoeuvrability. Being robust in design and build, gives the trucks an economical long-life operation. Combilift truly is the leader in providing customised materials handling equipment for the Australian Timber, Frame & Truss Industry.
