

PREFERRED TIMBER SUPPLIER

Made in America, LP's SolidStart engineered wood products range is superior to timber for a whole array of reasons. For starters, LP's SolidStart products are stronger and more consistent which allows for greater design options such as longer spans. Made of lighter material, they're easier and quicker to use than timber during construction. They're also sustainably produced and each comes with a lifetime limited warranty.

PRODUCTS AVAILABLE

- **LP SolidStart LSL**, the superior alternative to traditional timber, LP SolidStart LSL allows longer spans as beams and headers. Available in three grades for greater cost-effectiveness.
- **LP SolidStart LVL** offers greater load-carrying capacity than traditional timber, with consistent dimensions, enhanced durability and reduced shrinkage. Available in long lengths for greater open spans and project flexibility.
- **LP SolidStart I-Joists**, a diversified product line that offers ideal joist solutions for residential, commercial and industrial construction, LP SolidStart I-Joists are lightweight and more uniform in strength, size and stiffness than traditional timber.
- **LP SolidStart Rim Board**, an integral part of the framing package, LP SolidStart LSL and LVL Rim Board products are precision cut to match I-joists of any depth, helping to provide proper load transfer and reducing the likelihood of mistakes on a job.
- **Design Software**, LP's distributors offer free design and layout services for designs using LP® SolidStart® Engineered Wood Products.
