The name MiTek and Gang-Nail building products are synonymous with quality building systems, software and prefabricated timber trusses; so much so that the company was the first connector plate company in Australia to receive certification under international quality standard ISO 9001.

The ISO 9001 certification covers the design, manufacture and supply of a range of structural connectors and other fasteners for prefabricated timber trusses and wall frames for the building industry:

- The design and supply of computer software for fabricator design, estimating and production planning.
- A design service for timber structures.
- The supply of truss plant machinery.

So when you deal with MiTek or a MiTek licensed fabricator, you can be sure you're getting the best in advice, resources, manufacturing facilities and product quality that you'll find anywhere in the industry.
