 TRANSPORT TRANSFORMED

# PREFERRED TRANSPORT SERVICE SUPPLIER

*A Roadpod fitted truck can cut loading and unloading times to as little as 3 minutes!*

Roadpod is an innovative truck loading system that replaces or integrates with truck bodies and trailers to allow transport workers to safely load freight at ground level. It is the most advanced truck loading system on the market and the only one of its kind. The patented technology is revolutionising the world of transport.

When compared to traditional truck loading methods that involve an expensive platform or costly protective equipment, Roadpod is the simplest and safest solution available. The patented technology allows your crew to work from the ground level eliminating costly falls and injuries in the workplace as well as decreasing load time and, in turn, increasing profits.

By preloading Roadpods prior to delivery you will reduce turnaround times and save space in your yard. Keep your fleet on schedule and stop throwing away profits on driver downtime!

Our team will create a custom Roadpod solution that suits your company requirements, budget, and time frame.
